

**ESRI**

Dear ArcPad User:

Welcome to the ArcPad® Application Builder 6.0.1 update! Strategic updates to existing capabilities and new features included in this release make ArcPad a more robust platform for your mobile geographic information system (GIS) applications.

## **Feature updates include**

### **Customization**

Customization capabilities of ArcPad have been extended at the 6.0.1 release. The primary areas of customization enhancements are

- All geometry objects are now creatable and editable.
- Map rotation is now supported. Maps can be rotated at any angle or set to rotate automatically based on the current global positioning system (GPS) course.
- The object model has been expanded with several new objects and many new properties, methods, and events.
- More flexibility and functionality has been added to custom toolbars.
- Extensions can now provide support for read/write layers and communicate with the ArcPad object model more efficiently.
- Extensions can support enhanced GPS functionality and provide better control of the GPS port.
- Extensions can be written to provide support for generic tools.

### **ArcPad Studio**

The ArcPad Studio development environment has been enhanced to make it easier to use as well as to take advantage of the customization enhancements. The VBScript source code editor has been enhanced to display the current line and column number, and the Find, Find Next, and Find and Replace tools have been added.

~~Please consult the ReadMe document for additional information about the ArcPad Application Builder 6.0.1 release. The ReadMe document is located on the ArcPad Application Builder 6.0.1 CD-ROM. It is also installed on your PC (under Start > Programs > ArcGIS > ArcPad Application Builder > ArcPad Application Builder 6.0.1 ReadMe) when ArcPad Application Builder 6.0.1 is installed.~~

Thank you for your continued support of ArcPad!

The ArcPad Software Team
