CURRENT RESEARCH

Saving the Serengeti: The Frankfurt Zoological Society and the Paradox of Western Conservation
(Under contract with Oxford University Press)

This project investigates the blind spots and unintended consequences of German and European wildlife conservation and nature tourism after World War II. By examining the popular-science publications, documentary films, television programs, and conservation campaigns of the Zoological Society and its charismatic leader, media star Bernhard Grzimek, from the 1950s through the 1980s, *Saving the Serengeti* offers a critical lens for analyzing how the unresolved longings of Germany's short colonial period, the tensions of decolonization and the Cold War, and the rise of West Germans as the "world champions of travel" after 1960 shaped West German environmental politics at home and abroad in the decades between the Nazis and the Greens. Grzimek transformed the Society from a small band of animal lovers into one of the most important NGOs in global conservation by convincing Tanzanian president Julius Nyerere to set aside vast swathes of territory as national parks, including several game reserves first imposed by colonial administrators in German East Africa. Through these efforts, Grzimek saved the habitat of millions of endangered wild animals and created an income stream for newly independent African nations, yet the transformation of the Serengeti and other reserves into national parks came at a price: the dislocation of

Maasai pastoralists, increasing tension between farmers and wild animals along park borders, the loss of vernacular environmental knowledge critical to grassland ungulates, and a tendency for affluent Western tourists to “love nature to death.”
